Cliometrica

Journal of Historical Economics and Econometric History

Managing Editor:

Claude Diebolt, CNRS/University of Strasbourg 1 (France)

Co-Editors:

Dora Costa, Massachusetts Institute of Technology (USA)

Jean-Luc Demeulemeester, Free University of Brussels (Belgium)

Cliometrica provides a leading forum for exchange of ideas and research in all facets, in all historical periods and in all geographical locations of historical economics.

The journal encourages the methodological debate, the use of economic theory in general and model building in particular, the reliance upon quantification to buttress the models with historical data, the use of the more standard historical knowledge to broaden the understanding and suggesting new avenues of research, and the use of statistical theory and econometrics to combine models with data in a single consistent explanation.

The highest standards of quality are promoted.

All articles will be subject to *Cliometrica's* peer review process.

On occasion, specialised topics may be presented in a special issue.

First issue due in March 2007
