

## The most important Rocks commands

- *insert-ethers* Insert/remove a node to/from the MySQL cluster database.
- *rocks-dist mirror* Build or update a Rocks mirror.
- *rocks-dist dist* Build the RPM distribution for compute nodes.
- *shoot-node* Reinstall a compute node.
- *cluster-fork* Run any command serially on a cluster.  
*cluster-fork /boot/kickstart/cluster-kickstart* Reinstalls a cluster.
- *cluster-ps* Get a cluster wide process list.
- *cluster-kill* Kill processes running on the cluster.

**Test if the XML/kickstart infrastructure returns a OK kickstart file:**

```
cd /export/home/install ; ./kickstart.cgi -client="compute-0-0"
```

character   "           &           '           <           >

**XML**       &quot;   &amp;   &apos;   &lt;   &gt;
