Oioioi! Vi har nettopp fått melding fra en av fylkets detektorister (Frank Ludvigsen), om at han har funnet en romersk sølvdenar på et jorde i Ringsaker. Mynten er slått i 168 eller 169 e.Kr. Keiseren som er avbildet er Marcus Aurelius (161-180 e.Kr.) - den gamle keiseren fra filmen Gladiator.

Funnet blir ikke mindre spennende av at det i vår ble funnet en tilsvarende sølvdenar ikke langt unna. Kan disse myntene stamme fra et utpløyd skattefunn med romerske sølvmynter? Det finner vi kanskje snart ut for detektoristen søker videre i tett kontakt med oss.

Romerske sølvdenarer var ukjente her i Innlandet før detektortida. Nå har vi syv og tallet vil fortsette å stige. Hvordan er de romerske myntene havnet her - ved handel eller kom de hjem med innlendinger som hadde vært leiesoldater ved den germansk/romerske grensen?
