1 STRATEGIC FRAMEWORK

1.1 A CHANGING ENVIRONMENT FOR OPERATIONS

During its 15 years of operation, the Helsinki Collegium for Advanced Studies has established itself as both a unit of the University of Helsinki and a member of the European and global networks of institutes for advanced study. It has also established important relationships with society, for example, with research funders. The Collegium is the first institute of its kind in Finland and is a pioneer in such fields as international research cooperation and researcher mobility. The Collegium constitutes a creative and inspiring researcher community and environment, with time for research and researcher interaction and room for a range of researcher roles.

The Collegium’s operations are fully international. The working language is English. The Collegium's activities extensively cover the humanities and social sciences without imposing quotas on disciplines. Fellows are appointed once a year through an open application procedure. The applications are evaluated by the Collegium’s international Academic Advisory Board and the Collegium’s Board. The Collegium cooperates with many research funders, including various foundations and EU-level sponsors.

The Helsinki Collegium for Advanced Studies operates in an environment strongly characterised by the globalisation of scholarship, the economy, politics and culture. Competitiveness, financial accountability and social impact are increasingly demanded of contemporary research. At the same time, we live in an environment of great uncertainty. The status of autonomous basic research is in jeopardy, especially in the field of the humanities and social sciences, where research faces increasing pressure for direct applicability. The Collegium's operating environment is also influenced by the special characteristics of the Finnish university environment, such as the lack of career structure in the postdoctoral phase and the small number of permanent university positions. It is particularly difficult to measure the efficacy of interdisciplinary research in the humanities and social sciences with existing indicators.

If the Helsinki Research Centre of Social Sciences and Humanities is established as proposed in the final report of the University of Helsinki’s operational structure group and if the measures outlined in the development report on the Collegium are implemented, the Collegium’s environment will change fundamentally in the coming years.

1.2 MISSION

The mission of the Helsinki Collegium for Advanced Studies is to conduct high-grade research in the humanities and social sciences, to promote interdisciplinary cooperation with the University’s faculties, departments and other units as well as other universities, to develop and maintain international relations in the fields it represents, and to promote the international visibility of Finnish research.

The Collegium’s activities cover the humanities, social sciences, theology, law and behavioural sciences.

The Collegium development group proposes the following as the Collegium’s mission:

“The Helsinki Collegium for Advanced Studies of the University of Helsinki is a top-level, international and attractive research environment in the humanities and social sciences. The Collegium aims to create new research initiatives and promote interdisciplinarity. Researchers working at the Collegium actively participate in the University's doctoral education.”

The Board of the Collegium will discuss the new mission in 2017.
1.3 STRATEGIC OBJECTIVES AS WELL AS DEVELOPMENT AREAS

The Collegium primarily focuses on independent research in the humanities and social sciences and aims to promote interdisciplinary and international cooperation in its areas of expertise, i.e., in the entire field of research in the humanities and social sciences.

The Collegium appoints new fellows annually. Since the primary selection criterion is the high quality of the academic research proposal, the selection of fields represented by the fellows varies each year. The Collegium may also define research themes that both meet current challenges and increase research dialogue on the City Centre Campus. Due to this annual variation, the Collegium is unable to designate permanent content foci. Then again, the Collegium focuses on independent, researcher-driven basic research in the humanities and social sciences; the intention is that research stems from the research topics set by the appointed fellows. The Collegium profile also emphasises interdisciplinarity because appointees are expected to promote interaction that crosses the boundaries of traditional disciplines.

In addition to the Collegium’s basic independent research operations, which are funded solely by the UH, the Helsinki Collegium maintains and develops largely externally funded projects, structures and programmes which are deliberately focused on specific fields emphasised in the UH Strategic Plan (e.g., the Jane and Aatos Erkko Visiting Professorship in Studies on Contemporary Society).

1.4 Profile and focus areas

The Collegium primarily focuses on independent research in the humanities and social sciences and aims to promote interdisciplinary and international cooperation in its areas of expertise, i.e., in the entire field of research in the humanities and social sciences.

The Collegium appoints new fellows annually. Since the primary selection criterion is the high quality of the academic research proposal, the selection of fields represented by the fellows varies each year. The Collegium may also define research themes that both meet current challenges and increase research dialogue on the City Centre Campus. Due to this annual variation, the Collegium is unable to designate permanent content foci. Then again, the Collegium focuses on independent, researcher-driven basic research in the humanities and social sciences; the intention is that research stems from the research topics set by the appointed fellows. The Collegium profile also emphasises interdisciplinarity because appointees are expected to promote interaction that crosses the boundaries of traditional disciplines.

In addition to the Collegium’s basic independent research operations, which are funded solely by the UH, the Helsinki Collegium maintains and develops largely externally funded projects, structures and programmes which are deliberately focused on specific fields emphasised in the UH Strategic Plan (e.g., the Jane and Aatos Erkko Visiting Professorship in Studies on Contemporary Society).
1.5 Quality management

The primary objective of the Collegium’s quality management system is to ensure the high quality of research. For this reason, the Collegium has particularly invested in the quality of the recruitment procedure for its fellows. The procedure is the primary responsibility of the Collegium director. Other responsible parties include the Collegium’s Academic Advisory Board, the Board, the deputy directors, the head of administration and the head of human resources.

In addition to the mechanisms used to ensure quality in the recruitment process, the Collegium's quality management system includes the following: working groups and committees that prepare decisions; careful documentation of decisions, the resources allocated for the fellows’ work as well as related development and monitoring, evaluation of results and operations via available reporting and feedback systems, etc.

The director of the Collegium is responsible for the quality of the Collegium’s operations and results. The director has delegated some of this responsibility to the deputy directors. All persons working in the Collegium are responsible for the quality and development of their own work.

1.6 Risk assessment and management

1. Sufficiency of resources for administrative services in the new service organisation

The adoption of a new administrative organisation will cause changes to the Collegium’s operations. The Collegium must reassess how it can provide high-quality support services to top researchers, organise seminar series and conferences, and implement other measures that promote collegiality and public engagement. The administration of application processes for research fellows will also require a reorganisation. The Collegium has no support staff focused solely on the Collegium operations.

Likelihood: Great
Impact on operations: Great
Measures to be taken: Ensuring sufficient resources, streamlining processes and prioritising operations
Managing body: University Services, director of the Collegium

2. Reduction of the Collegium’s scientific autonomy as well as change of identity

The broad range of the Collegium’s scientific activities and its identity as a leading international institute for advanced study may be affected or jeopardised, for example, as a result of operational restructuring.

Likelihood: Great
Impact on operations: Great
Measures to be taken: Discussions with interest groups, participation in joint development
Managing body: University as well as director and Board of the Collegium

3. Increases in costs, expensive facilities

Facility costs continue to rise, but funding has not increased at a commensurate pace. As this problem pertains to all University units, the Collegium must also struggle to offer appropriate facilities (ideally private rooms) particularly to its fellows representing the international top of their field. First-rate facilities for seminars and events are also necessary for the Collegium.

Likelihood: Great
Impact on operations: Moderate
Measures to be taken: Careful facility planning. Some facilities were relinquished in 2016.
Managing body: director of the Collegium

1.7 National special duties, international and academic special responsibilities, coordination of networks

Not applicable.
2 MEASURES

The most important measures to be taken in **2017** are as follows:

- Recruitment of research fellows: a streamlined application process in 2017 as well as recruitment in the area of digital humanities; reform of the application process for research fellows in spring 2017 (2018 application) (measure 2)
- Recruitment of the director (measure 2)
- High-quality basic research: establishment of a five-member strategic advisory group consisting of members of the Academic Advisory Board in spring 2017; joint meeting of the Board and the Academic Advisory Board in spring 2017 to consider the guidelines for developing the Collegium (measure 7)
- International partnerships; IAS networks; work of the Academic Advisory Board’s advisory group (measure 14)
- Interaction and learning in the scientific community: participation in doctoral education on the City Centre Campus through Winter School activities (measure 22)
- An open and innovative operational culture: use of social media to promote open science and collegiality (measure 31)

### 2.1 A creative, international environment for learning and top-level research

3 RESOURCES

3.1 Human resources plan

Launched in autumn 2016, the process for recruiting the Collegium director for the term running 1 August 2017 to 31 July 2022 plays a key role in the Collegium’s human resource planning.

Other Collegium staff consist of researchers at various career stages who work on a fixed-term basis. The annual application process for 8–12 research fellows is of crucial importance. The Board approves the annual application documents and application instructions. The idea is to select researchers of various degrees of seniority each year (research directors, i.e., professors, university researchers and postdoctoral researchers). However, no quotas have been fixed, so the number of researchers falling into each category may vary considerably from year to year. The director of the Helsinki Collegium for Advanced Studies will determine the number and length of the appointments on the basis of the applicants’ research proposals and the financial situation of the Collegium.

In addition to the open application process, the Collegium appoints researchers for fellowship programmes through a special invitation procedure.

As new fellows are selected each year, the total number of personnel should remain (nearly) unchanged, although the funding situation must naturally be considered. Recruitment aims to take into account that researchers at different career stages are equally represented on the staff. The staff structure must be examined in a corresponding manner each year as the application process is planned.

The Collegium aims to secure adequate resources for its researchers and for the support and administration of the Collegium’s development work in collaboration with University Services.

3.2 Facilities plan

The Collegium has access to facilities which are largely suitable for its purposes at Fabianinkatu 24.

Attention will be focused on the efficient use of facilities, and any unnecessary facilities will be relinquished.

3.3 Budget

See appendix (in Finnish).

4 QUANTITATIVE TARGETS AND MONITORING

4.1 Quantitative targets for teaching

Limited to faculties.

4.2 Quantitative follow-up items and indicators

See appendix (in Finnish).
4.3 Roles and responsibilities in monitoring and reporting

The Collegium director is responsible for the realisation, follow-up and assessment of the implementation plan. The realisation is assessed annually through monitoring efforts coordinated by the head of administration. The monitoring is based on the qualitative reporting of the Collegium units and working groups on progress relating to measures and development areas, as well as on the use of indicators. Based on the above reports and indicators, the director reports to the Board and the rector on the realisation of the plan. The director assesses the achievement of objectives together with Collegium staff.

Fellows are responsible for reporting to the TUHAT database. The Collegium has a TUHAT coordinator who will assist in using the TUHAT system if necessary. The Collegium leadership is primarily responsible for surveys on work atmosphere and similar issues, as well as for implementing interdisciplinarity. However, the entire community shares the responsibility for developing this characteristic typical of institutes for advanced study (IAS).
